

ANNUAL REPORT of VITAL STATISTICS

1966

**Commonwealth of Massachusetts
Department of Public Health**

THE COMMONWEALTH OF MASSACHUSETTS

DEPARTMENT OF PUBLIC HEALTH

Alfred L. Frechette, M.D.
Commissioner of Public Health

THIRD ANNUAL REPORT

OF

HEALTH STATISTICS OF MASSACHUSETTS

Births, Marriages, Deaths (Divorces and Population)

For the Year Ending December 31, 1966

Compiled by Paul D. Parker, Ed.D.
Director, Training and Research,
Acting Director, Health Statistics

The Commonwealth of Massachusetts
Department of Public Health
State House, Boston 02133

ALFRED L. FRECHETTE, M.D.
Commissioner

December 31, 1968

To the Honorable Senate and
House of Representatives

I have the honor to submit herewith, as required by Chapter 111, Section 2, of the General Laws, the one hundred and twenty-fifth Annual Report on statistics of births, deaths, marriages, and divorces, in Massachusetts for the calendar year 1966.

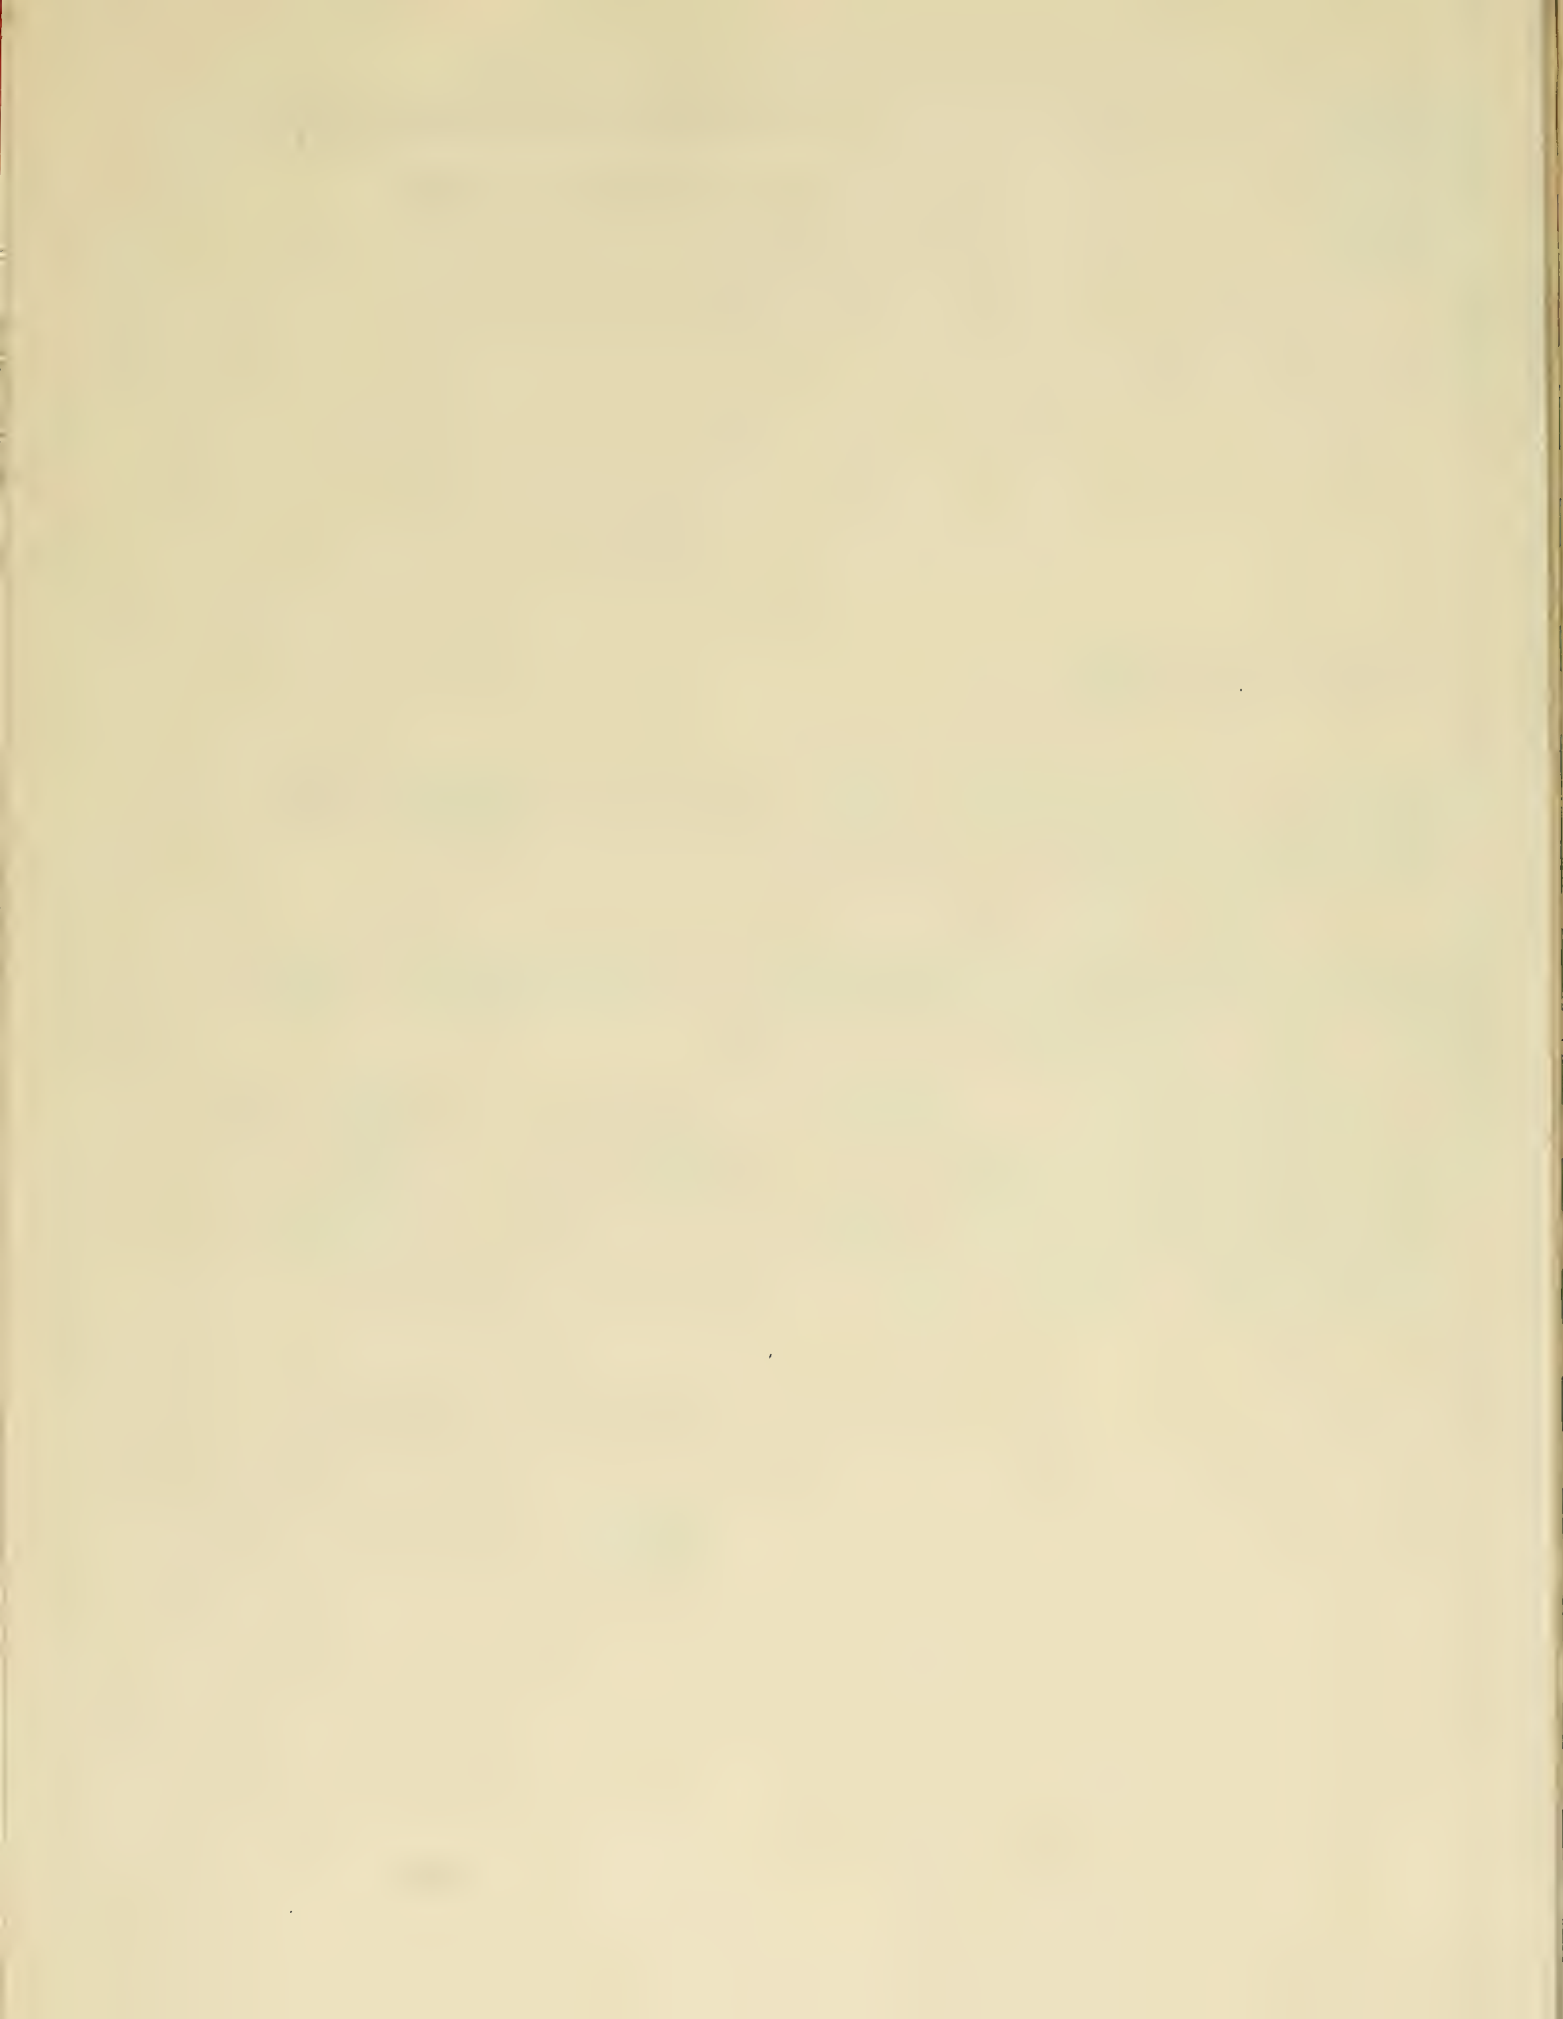

In accordance with Chapter 508, Acts of 1964, this is the third Annual Report of Vital Statistics published by the Department of Public Health, and is intended for administrative and research purposes connected with health programs and population studies.

The editorial review and presentation of statistical data were written by Paul D. Parker, Ed.D., Director of Training and Research, Acting Director of the Health Statistics Unit. Administrative assistance in the processing, editing, and compilation of computer output was prepared under the direction of Nancy N. Shaughnessy, Statistician. The presentation of tabular findings is restricted to utility within the meaning of the statute by authority of which the tables are prepared.

Respectfully submitted,

Alfred L. Frechette

Alfred L. Frechette, M.D.
Commissioner

VITAL STATISTICS

INTRODUCTION

Massachusetts was one of the first colonies to recognize the importance of the registration of vital events, and as early as 1639 required the registration of births, marriages, and deaths. Since the year 1842, statutes have required city or town clerks to forward attested certified copies of original certificates to the office of the Secretary of State to be filed in a central registry. In 1964, the Legislature transferred certain duties relative to vital statistics from the Secretary of the Commonwealth to the Commissioner of Public Health for administrative, research, and reference purposes connected with health programs and population studies.

This is the third annual report of Vital Statistics produced by the Health Statistics Unit of the Department of Public Health. These statistics represent an extension of a computer program developed for processing a data base of health information. It includes the capability of providing information on deaths due to any specific cause or causes of death, and provides tabular findings for deaths by age groups, sex, color, and marital status.

Tabulations are based primarily on resident data rather than place or occurrence of event. For historical and demographic purposes there are general reference tables where both occurrence and residence data are reported.

There are many limitations in the methods used for obtaining and processing vital statistics, which should be considered in respect to the use of this report. The quality and quantity of data is dependent upon those who furnish, record, transcribe, and transmit information, as well as upon those who code, query, key-punch, verify, machine process, and publish.

The completeness of this data is satisfactory for births, deaths, and marriages, but not for fetal deaths and divorces. Fetal death reporting is sporadic and affected by the limitations of law associated with the registration function. Divorces are reported by county, and only reflect number of divorces by cause. In previous years some "decrees nisi" were apparently included in the divorce statistics. For this report an effort has been made to eliminate decrees nisi, which may account for discrepancies in comparisons with prior years.

Despite limitations, this report is assumed to be valid and reliable based upon a number of manual error-checking processes and elaborate computer edit programs.

Requests for more detailed findings should be sent to the Health Statistics Unit, Department of Public Health, State House, Boston, Massachusetts 02133.

SOURCES OF INFORMATION

Births:

City or town clerks in each of the 351 Massachusetts communities receive or obtain and record the following facts relative to births in their city or town. The records of birth include: date of record, date and place of birth, name, sex, and color of child, names, places of birth, and residences of parents, including the maiden name of mother, and occupation of father.

Upon receipt of notification of births occurring in his town, each of the city or town clerks is required to forward attested certified copies of the original certificates to the central registry in the Office of the Secretary of State.

NOTE: Legislative Acts of 1968 have changed the reporting system effective January 1, 1969. A multiple copy birth certificate will afford simultaneous reporting by hospital administrators to city and town clerks, and the State Department of Public Health.

Resident Live Births and Fetal Deaths
by Place of Delivery

<u>Place of Delivery</u>	<u>Live Birth</u>	<u>Fetal Deaths</u>
Hospital	97,318	1,197
Other and not stated	195	16
Total	<u>97,513</u>	<u>1,213</u>

Deaths

Hospital and other institutions are required to obtain, when persons are received, the facts which are required for record in the deaths of such persons.

Registration is accomplished by filing a standard death certificate, medical examiner's death certificate, or fetal death certificate, with the local board of health, which in turn transmits the certificates to the city or town clerk.

The clerk of each city and town is required to transmit on or before the tenth day of every month to the Secretary of State, upon forms furnished by him, certified copies of the records of deaths occurring during the preceding month, or in case no such deaths have occurred, a certificate of such fact...(and) the Office of the Secretary in a reasonable time shall make the birth, marriage, and death records available to the Department of Public Health.

Deaths investigated by medical examiners are based upon deaths supposedly due to violence or where no physician has been in attendance. These include deaths caused by the action of chemical, thermal, or electrical agents, or following abortion, or from diseases resulting from injury or infection related to occupation, or suddenly where not disabled by recognizable disease, and those of persons found dead.

Fetal Deaths

Town clerks record certificates of fetal deaths in the same manner as death certificates. When a child is born dead, after a period of not less than 20 weeks' gestation, the physician in attendance at birth of such child shall furnish for registration at the request of an undertaker, or other authorized person, or any member of the family of the deceased, a certificate of fetal death.

Marriages

Persons intending to marry must file notice of intention to marry not less than three (3) days prior to the marriage with the clerk or registrar of the city or town where they respectively dwell if both dwell within the Commonwealth; or if they do not dwell within the Commonwealth, with the clerk of city or town where they intend to marry. The notice must contain the facts required for the record and be sworn to by each of the parties of the marriage.

1. The public registration of records of marriages are made in the first instance in the cities and town of the state where the contracting parties dwell, and if the ceremony is solemnized in a town other than where the parties reside, in the town where the ceremony is performed.
2. The clergyman or other authorized person who performs the ceremony, must complete the marriage certificate with information required (Section 1, Chapter 46), and send a copy of such certificate to the clerk of the city or town where the bride resides, the clerk of the city or town where the groom resides, and the clerk of the city or town where the marriage is performed.
3. The city or town clerk receives and records the marriage certificate:
 - A. If the bride is a resident of Massachusetts, the city or town clerk of the city or town where the bride resides returns a copy to the Secretary of State, however,
 - B. If the bride is not a resident of Massachusetts and the groom is a resident of Massachusetts, then the clerk of the city or town of the groom's residence returns a copy to the Secretary of State, however,
 - C. If neither the bride nor the groom is a resident of Massachusetts, the clerk of the city or town where the marriage takes place returns a copy of the certificate to the Secretary of the Commonwealth.

DEFINITIONS

Residence is defined as that of the deceased for a death, and that of the mother for a birth or fetal death. Residents from other states who have lived in Massachusetts for more than one year are considered residents of this state, except in those cases of deaths within resident institutions, regardless of the length of stay within the institution. Former residents of Massachusetts who have been absent more than one year are no longer considered residents of this state.

Live Birth is considered the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which following expulsion or extraction breaths or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles whether or not the umbilical cord has been cut or the placenta is attached.

Immature Birth is considered as one for which the birth weight is 2500 grams (5 pounds 8 ounces) or less, regardless of the period of gestation.

Neonatal death is the death of a child occurring during the first twenty-eight days of life.

Infant death is the death of a child under one year of age.

Fetal death is the death of the product of conception prior to the complete expulsion or extraction from its mother, irrespective of the duration of the pregnancy. The death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

Underlying cause of death is defined as the disease or injury which initiated the sequence of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The responsibility for indicating the underlying cause of death is that of the certifying physician or medical examiner.

INTERPRETATION OF DATA

Population

Massachusetts interdecile census (1965) reported a total population of 5,295,281, which does not include student and military families residing in the Commonwealth. If population rates are used, it is suggested that the Massachusetts census findings at the end of this report would more accurately reflect a "residence" base for data.

In 1966 there were 97,513 resident births and 59,301 resident deaths, resulting in a natural increase by residence, of 38,212 citizens in the Commonwealth. The number of resident live births was the lowest recorded in fifteen years, and continues to reflect the national trend of a declining birth rate, whereas the Massachusetts death rate remains relatively stable over the same period of time.

Resident Births and Deaths
for 1966 and
last three census years

Year	Births	Rate per 1,000 Population	Deaths	Rate per 1,000 Population	Natural Increase
1966	97,513	18	59,301	11	38,212
1965	100,262	19	58,853	11	41,409
*1960	114,018	22	56,560	11	57,458
1955	109,610	23	53,386	11	56,224

* Federal Census Reports

The following table summarizes the vital events reported for Massachusetts in the calendar year, 1966.

Summary Table

Recorded Events By Residence	Total	Male	Female	Unknown, or Sex Not Stated
Live Births	97,513	49,933	47,579	1
Deaths (including infant and neonatal)	59,301	31,531	27,769	1
Infant (including neonatal)	2,146	1,259	886	1
Neonatal (under 28 days)	1,657	961	695	1
*Fetal Deaths	1,213	626	579	8

* Those occurring to Massachusetts residents, while out of State, are not included.

Recorded Events by Occurrence

Marriages - 40,066

Divorces - 6,769

Resident births:

The need for more detailed and complete birth information is essential to Public Health programs and planning. Since continued surveillance of factors contributing to infant and maternal morbidity and mortality is necessary for the reduction in fetal wastage and needless loss of life, some of the "high risk" areas are emphasized in this report.

Operationally defined, "high risk" mothers are those who live under adverse socio-economic conditions, and/or out-of-wedlock, with histories of complications and/or difficulties in pregnancy. In addition, age is considered a factor for those below or above the prime child-bearing years.

Reported findings indicate that:

1. The number of recorded resident births in 1966 for Massachusetts totaled 97,513. Classified as "white" were 92,451 (95%) and "non-white" were 5,004 (5%).
2. There were 61 births reported for children age fourteen or less and forty-four percent (44%) were classified as "non-white".
3. The reported number of out-of-wedlock births recorded in the State for 1966 was 4,336, or approximately 4% of the total resident live births. Ratios of out-of-wedlock births per 1,000 births to married women, were 34.1 for the "white" population and 341.6 for the "non-white".
4. There were 1,833 reported out-of-wedlock births to teen-age mothers, and thirty percent (30%) were classified as "non-white", which represents an increasing number of such births in younger age groups.
5. There were 7,513 low birth weight (2500 grams or less) children born in 1966. Although the "non-white" population accounted for only 5% of the total live births recorded, 9% of the low birth weight ("immature") children were classified as "non-white".

In summary, classification of births by age, marital status, color, and weight of infant, suggests the need for more intensive Public Health programs for "high risk" mothers.

Deaths:

There were 59,301 resident deaths reported in 1966. Male deaths again outnumbered female deaths, and were greater in number for every age bracket of five year intervals through age 79.

Percentages of total deaths by age group in five year intervals for 1966, were identical with the findings for 1965. Each of these reports reflect an increase of deaths occurring in the 75-79 year age group.

1. The majority of all deaths (56%) occurred within the population age 70 and above.
2. Two-thirds of all deaths (67%) occurred within the population age 65 and above, and
3. Three-fourths of all deaths (75%) occurred within the population age 60 and above.
4. The greatest number of male and female deaths recorded for ten year age brackets, occurred in the 70-79 group for males with 8,932 deaths, and in the 80 plus age group for females with 9,852 deaths.

Some of the findings for resident deaths by marital status, sex, and age-group were as follows:

1. There were 11,239 deaths of single individuals distributed across all age groups, of which 5,831 were male and 5,408 female. In the "prime-marriageable" age group of 20-29, there were more than twice as many deaths among men (461) as women (191).
2. More than twice as many married men (18,148) died in 1966 than their counterparts of women (7,833).
3. More divorced males (1,152) died, than did divorced females (631), in 1966.
4. More than twice as many widowed females (13,877) than widowed males (6,334) expired in 1966.

More definitive death statistics can be gleaned from the tables of "Detailed Classification of Resident Deaths by Cause and Sex", "Fifteen Selected Causes of Death", and "Five Leading Causes of Death by Age-Group".

1. Heart Disease (code numbers 400-402; 410-443) totaled 24,672 or 42% of all deaths recorded in 1966. In age brackets of ten-year intervals arteriosclerotic and degenerative heart disease (code numbers 420-422) was the second leading cause of death for the age group 30-39, and the leading cause of death for all subsequent age groups.
2. Malignant neoplasms (cancer, code numbers 140-205) including neoplasms of lymphatic and hematopoietic tissues, totaled 10,520 deaths or 18% of all deaths recorded in 1966. For all age groups, except for children in the first year of life, this was one of the five leading causes of death. Approximately 20% of the deaths in the 5-9; 10-14; and 30-39 year age groups were attributed to this cause.
3. Vascular lesions (code numbers 330-334) affecting the central nervous system, totaled 5,905 deaths to residents in 1966. This group represented 10% of the total deaths and was the third leading cause of death in the Commonwealth.
4. Accidental deaths (detailed list numbers 800-802; 840-962) are treated separately from motor vehicle accidents (810-835). These are classified by type of accident, age group and sex in a separate table. Excluding deaths to children below age one, accidental deaths (non motor-vehicle) were one of the five leading causes of death for all age groups through age 39 and responsible for 3% of deaths to elderly people age 80 and above. It was the leading cause of death for age groups 1-4; 5-9; 10-14; and second only to motor vehicle accidents in the age group 15-19.
5. Motor vehicle accidents (detailed list number 810-835) compiled independently from other accidents, was the leading cause of death for age groups 15-19 and 20-29; and was one of the five leading causes of death for all age groups up to age fifty.
6. Suicide and self-inflicted injury (963,970-979) was once again one of the five leading causes of death for the 15-19 and 20-29 year old age groups. It is interesting to note that these same age groups had as a leading cause of death "motor vehicle accidents". How many of these motor vehicle accident deaths should have been categorized as suicide?

Mortality findings from fifteen selected causes of resident deaths in Massachusetts were developed for each of the cities and towns of the Commonwealth. Findings for 1966 were similar to those of 1964 and 1965 with slight percentage differences reflected.

**Mortality From 15 Selected Causes
of Resident Deaths by Percentages
Massachusetts 1966**

Selected Causes of Death	International List Number	Total Deaths	Percentages of Deaths
1. Disease of the Heart	400-402, 410-443	24,672	41.6
2. Malignant Neoplasms, etc.	140-205	10,520	17.7
3. Vascular Lesions, etc.	330-334	5,905	9.9
4. Influenza and Pneumonia, etc.	480-493	2,419	4.1
5. All other Accidents	800-802, 840-962	1,654	2.8
6. Certain Diseases of Early Infancy	760-776	1,400	2.4
7. General Arteriosclerosis	450	1,218	2.0
8. Other Diseases of Circulatory System	451-468	1,102	1.8
9. Cirrhosis of the Liver	581	1,048	1.8
10. Motor Vehicle Accidents	810-835	1,025	1.7
11. Diabetes Mellitus	260	988	1.7
12. Congenital Malformations	750-759	477	.8
13. Suicide	963,970-979	419	.7
14. Other Hypertensive Disease	444-447	341	.6
15. Symptoms, Senility and Ill Defined Conditions	780-795	286	.5
All other causes adjusted		<u>5,827</u>	<u>9.9</u>
Totals		59,301	100.0

Infant Mortality:

A total of 2,146 deaths of children below age one were recorded in 1966, of which 1,259 were male and 886 were female. The total exceeds the sum of male and female deaths because of data for which sex was not stated. Approximately 90% of these deaths are accounted for in the table for five leading causes of death by age group. Neonatal deaths (under 28 days) numbered 1,657, of which more than half (934) died during the first day of life, and more than 90% (1,505) died during the first week of life. Total resident deaths of under 28 days (neonatal) and under one year (infant) are tabulated by sex, for counties, cities and towns of the Commonwealth.

Editor's Note:

Research workers in mortality study areas, may apply to the Health Statistics Unit for more detailed descriptions of specific cause of death findings. As noted earlier, access to such information is possible with the new computer programs written for the 1966 Annual Report within the meaning of the statute by authority of which the tables have been prepared.

Fetal Deaths:

Only 1,213 fetal deaths were reported for Massachusetts residents in 1966, and of this number all but 16 were reported by hospitals. Estimates for Massachusetts by Public Health officials, are far in excess of the number of fetal deaths reported, and as such, fetal wastage should be considered a major Public Health concern.

Despite the limited reporting of fetal deaths by physicians, the findings for 1966 indicate that again:

1. A disproportionate number of fetal deaths occurred in the non-white population where the ratio of fetal deaths per 1,000 live births reported was 12.0 for the "white" population and 21.0 for the "non-white",
2. Proportionately, the greatest number of fetal deaths reported occurred in the "high risk" mother groups, ages 35 and above, and
3. In the prime child-bearing years of 20-29, the ratio of fetal deaths to 1,000 live births was almost twice as great for "non-white" mothers (19.3) as compared with (9.8) for "white" mothers.

Marriages:

The number of marriages recorded in Massachusetts for 1966 totaled 40,066 or an increase of 1,785 marriages above the previous year. Of the total, 35 percent represented Massachusetts resident brides and grooms (14,102). There were 12,657 marriages between resident brides and non-resident grooms, and 2,921 marriages between non-resident brides and resident grooms. Approximately one-fourth of the total marriages (10,386) were between non-resident brides and grooms.

1. There were 31,123 marriages which involved first marriages for both bride and groom.
2. There were 5,557 women and 6,075 men who were recorded for second marriages.
3. There were 605 brides and 524 grooms who were married for the third time.
4. There were 55 brides and 33 grooms married for the fourth time, and
5. There were 4 brides and 2 grooms who tried marriage for the fifth time.

Some findings of note include:

1. Seventeen girls below the age of fifteen were married in 1966.
2. There were 4,125 teenage boys married.
3. Total teenage marriages were 3,601.
4. In the golden years of seventy and above, there were 133 brides and 304 grooms married, of which four men and four women were married for the first time.
5. In the widowed population 1,739 women and 1,800 men remarried.
6. In the divorced population 4,474 women and 4,831 men were married again.

Divorces:

Divorce findings for 1966 reported:

1. There were 6,769 divorces and 182 annulments granted.
2. Fifty-eight percent (58%) of the divorces and 71% of the annulments were not contested.
3. Approximately 38% or 2,594 divorces occurred following marriage of five years or less duration.
